We are an initiative dedicated to solar energy with triple impact, through training, consulting services, installations, and social projects. Harnessing the Power of the Sun: A Path to Sustainable Development

At RK Solar Energy, we're proud to offer comprehensive residential rooftop solar services that enable you to harness the power of the sun and take control of your energy consumption. Our tailored solutions are designed to not only meet your energy needs but also to provide long-term savings, environmental benefits, and energy independence.

We summarize the fundamental legal and strategic tools which are available for solar energy deployment, survey the penetration of solar energy into the country's energy landscape, identify national contributions to the local value chain, and review past and present research and development achievements.

We summarize the fundamental legal and strategic tools which are available for solar energy deployment, survey the penetration of solar energy into the country's energy landscape, identify national contributions to the local value chain, and review past and present research and development achievements.

There is a measure of agreement that Argentina's solar resource is ideal for photovoltaic (PV) and solar thermal (ST) development, both for large- and small-scale (distributed) installations. The yearly Renewable Energy Country Attractiveness Index published by Ernst and Young places Argentina in the 18th position for PV [1] .

How is the overall political context of Argentina impacting the development of the photovoltaic market for distributed-generation and which role does distributed photovoltaic energy play in the energy strategy of the country?

Argentina has taken another step towards the future of renewable energy. All thanks to the inauguration of the largest photovoltaic plant in South America. Located in the Puna of Jujuy, the Cauchari plant has been

equipped with more than 900 thousand solar panels that will occupy 600 hectares in the town of Susques, about 4200 meters above sea ...

Argentina is aiming to generate 57% of its energy from renewable sources by the end of the decade, according to an official energy transition plan launched in late June. The country will also target 5,000 kilometres of new transmission lines, an 8% reduction in overall energy demand, and one gigawatt (GW) of distributed generation, with the ...
