

# Small solar panel to charge mobile phone

Can a solar phone charger charge a phone?

Solar panels on phone chargers are small -- meaning they can only catch so much of the sun, and thus their output is also small. A solar phone charger equipped with a battery pack can store power to use later, and thus kick out a higher wattage to charge your phone, quickly, and safely. See also: What is a Solar Charger?

What are the different types of solar phone chargers?

There are two types of solar phone chargers: Direct solar chargers connect the solar panels to your phone, so the energy produced by the panels goes directly into your phone's battery. A battery bank solar charger doesn't get hooked up to your phone.

How do solar panel phone chargers work?

Solar panel phone chargers work by utilizing small solar panels to harness the power of the sun to charge either your phone's battery directly or a separate battery bank attached to the panel.

Should you use a portable solar panel Charger?

Typically, portable solar panel chargers are meant to function as a source of backup power, not as the primary way to charge your phone every day because of their slow charging speed. The quality and efficiency of solar-powered phone chargers are getting better all the time.

How do you charge a solar phone without a battery?

The most portable method is using a purpose-built solar phone charger with or without a built-in battery bank, allowing you to charge your phone when there is no power outlet around. The third, least consistent method is to charge your phone directly from a small solar panel using a 12v connector.

What is the best solar phone charger?

Solar chargers have a variety of features that will make one more suitable to your needs than another. With all that said, our favorite solar panel phone charger is the Goal Zero Nomad 7 Plus. While the unit does not have a built-in battery bank, it is rugged, weather-proof, and uses some of the highest-efficiency solar cells on the market.
