

Are smart greenhouses a good idea for Mongolian nomads?

Since Mongolian nomads live on the move, smart greenhouses for Mongolian homes should be easy to install and dismantle. Mongolia has an arid climate with an average annual precipitation of 350 mm and is the least densely populated country. Therefore, an imbalance of food ingredients may occur. In particular, it is not easy to supply vegetables.

How can Mongolia achieve a brighter and greener future?

By harnessing its rich renewable resources and implementing inclusive policies, Mongolia can secure a brighter, greener future for all its citizens. The UNDP remains committed to supporting Mongolia in this vital transition, ensuring that the shift to clean energy benefits everyone, leaving no one behind.

Can a hydroponic greenhouse suit the Mongolian environment?

Regarding these research results, we proposed a hydroponic greenhouse to suit the Mongolian environment. Since the sub-zero weather continues for more than six months, the greenhouse has a double structure. A power generation system is essential for nomads, and we designed it to save as much power as possible in an emergency.

National Dispatching Center (NDC), the national power system operator and the owner of the existing electricity management system, finds it challenging to maintain the stability of the power grid with increasing output from fluctuating and intermittent renewable energy sources, such as solar photovoltaic and wind turbines, in the grid. These constraints make it ...

In the case of installing a greenhouse in a nomadic away from the city, we can use a temperature difference for solar panels, wind power, and electric generators. ... This paper proposes a design for a sustainable home-smart greenhouse in Mongolia. The smart greenhouse design considered Mongolia's environmental characteristics and unique ...
