Will EIB support Engie to deploy off-grid solar power in Benin?

The new Benin cooperation follows EIB's previous support for ENGIE to deploy off-grid solar power in Uganda. Benin is the sixth African country to benefit from the EIB's streamlined support for African off-grid energy investment, following recent backing for projects in Mozambique, Uganda, Chad, the Democratic Republic of Congo and the Comoros.

Are sodium-ion batteries a viable alternative for EES systems?

Due to the wide availability and low cost of sodium resources, sodium-ion batteries (SIBs) are regarded as a promising alternative for next-generation large-scale EES systems.

How many people in Benin rely on kerosene?

More than one million households are dependent on polluting and inefficient lighting by kerosene or candles, and increasingly expensive generators. Less than one in five people living in remote and rural communities across Benin have access to reliable electricity and only 10% of households are using off-grid solar products.

What can Engie do for Benin?

Following the new agreement between ENGIE and the European Investment Bank, households, entrepreneurs and smallholders across Benin will be able to access electricity for mobile phones, solar lighting, refrigeration, radio and television.

Can sodium ion batteries be used for energy storage?

2.1. The revival of room-temperature sodium-ion batteries Due to the abundant sodium (Na) reserves in the Earth's crust (Fig. 5 (a)) and to the similar physicochemical properties of sodium and lithium, sodium-based electrochemical energy storage holds significant promise for large-scale energy storage and grid development.

Are sodium-based rechargeable batteries possible?

For example, high-temperature zero emission battery research activity (ZEBRA) cells based on Na/NiCl<sub>2</sub> systems and high-temperature Na-S cells, which are successful commercial cases of stationary and mobile applications, have already demonstrated the potential of sodium-based rechargeable batteries.
