

Solar Mount Photography Tips

Can you photograph the Sun with a solar filter?

In order to safely photograph the Sun, you must attach a solar filter to your camera lens or optical system. Solar filters only allow filtered Sun into your lens, viewfinder, and eyes, lessening the likelihood of damage to all. You might also want to use lens hoods to diffract the Sun's rays from your equipment.

How to take a good solar photo?

Try to make it as detailed as possible. If no spots are visible, zoom on the solar disk edge and aim to make it as sharp as possible. Solar filter aside, there are few accessories you may want to consider when taking photos of the Sun. While not necessary, a tripod will improve the quality of your solar photography.

Is solar photography a good idea?

Solar photography is a very interesting, easy and affordable experience. A cheap white light filter on a superzoom bridge camera is all you need to peak into the sun's secrets. The greatest thing about solar photography is that the Sun is up there during the daytime hours.

Do you need a tripod for solar photography?

Solar filter aside, there are few accessories you may want to consider when taking photos of the Sun. While not necessary, a tripod will improve the quality of your solar photography. With medium telephoto lenses, you can get a good 'casual' shoot of the Sun handheld. But with longer lenses or when shooting for image staking, the tripod is a must.

Which camera should I use for solar photography?

Most any color camera, such as a DSLR or mirrorless camera can capture a pleasing white light image, so you can use pretty much any camera you already have. Solar photography is easy but great care must be taken when pointing any telephoto lens or telescope at the Sun.

Can you point a camera at the Sun?

DO NOT point a camera at the sun unless the optics are fitted with a certified solar filter. Optics can magnify the intensity and brightness of sunlight, and this can cause damage to your equipment.
