

Are there occupational safety risks associated with solar PV installation?

An obstacle to solar PV growth is the severity of the occupational safety risks associated with their installation. Although PV installers are known to experience some of the most significant and widespread construction-related occupational safety risks, PV installer accident investigation research, reporting, and verification are limited.

How to avoid solar PV re accidents?

Existing approaches to avoid solar PV re accidents mainly include preventive actions. The preventive actions include array recombination and detection algorithm research. The studies illustrate the reconstruction of PV modules or PV arrays, and the studies introduce algorithm to detect the faulty PV modules.

Which safety risks are associated with PV installations?

Through reviewing these articles, four major safety risk categories were identified as being associated with PV installations: (1) electrical and fire risks, (2) heat stress, (3) manual handling risks, and (4) fall risks.

How dangerous is a photovoltaic installation?

Safety risks and mitigation measures Falls from elevated surfaces are the most significant contributing occupational hazard to fatalities in the construction industry (Dong et al., 2019, U.S. Department of Labor, 1990). Photovoltaic installations performed on elevated working surfaces expose installers to the risk of falling from dangerous heights.

How to reduce re accidents in large scale applications of solar panels?

In order to minimize the risks of re accidents in large scale applications of solar panels, this review focuses on the latest techniques for reducing hot spot effects and DC arcs. The risk mitigation solutions mainly focus on two aspects: structure reconstruction and faulty diagnosis algorithm.

What causes solar panel re accidents?

According to , approximately 51% of the PV related re accidents is related to installation errors or poor quality of PV modules, which further causes cable faults on PV modules. On the contrary, the hot-spot effect is liable for a relatively lower percentage of the solar panel re accidents.
