

What is a photovoltaic solar system?

A Photovoltaic solar system. A linked collection of solar panels on a roof is called an 'array'. Power density is the amount of power per mass. PV inverters are measured by power density. The higher the power per mass, the better the inverter.

What is a solar energy glossary?

Our solar energy glossary offers a collection of key terms and phrases, explained simply and concisely. A type of electrical current that circuits and appliances in most homes utilize. Expressed as a sine wave, the current of AC passes through zero when it changes direction, which makes it a safer electrical current.

What is a photovoltaic (PV) cell?

Photovoltaic (PV) Cell: The smallest semiconductor element within a PV module to perform the immediate conversion of light into electrical energy (direct current voltage and current). Also called a solar cell.

What is a PV panel?

Photovoltaic (PV) Panel: Often used interchangeably with PV module (especially in one module systems), but more accurately used to refer to a physically connected collection of modules (i.e., a laminate string of modules used to achieve a required voltage and current).

What is a photovoltaic (PV) module?

photovoltaic (PV) module --The smallest environmentally protected, essentially planar assembly of solar cells and ancillary parts, such as interconnections, terminals, [and protective devices such as diodes] intended to generate DC power under unconcentrated sunlight.
