

Chile. Source: Chile Ministry of Energy. The National Lithium Strategy is a set of measures that seek to develop the Chilean lithium sector in a sustainable way. Some of the most relevant actions that are possible are: Create the National Lithium Company. Create a Network of Protected Salt Flats and ensure

The excellent solar resources in Chile have helped it to become a destination of choice for solar developers. The country receives some of the strongest and most consistent sunshine on the planet, especially in the Atacama Desert, in the north (2,400kWh/m²).

Chile's solar and battery expansion is poised to revolutionize the country's power market. Solar will dominate the energy mix, while batteries will ensure that renewable energy can be stored and dispatched when needed, mitigating intermittency issues.

Last December, Chile's centre-right government published the country's first energy transition strategy, which provided targets for achieving net-zero emissions by 2050, including accelerating solar, wind and geothermal ...

Last December, Chile's centre-right government published the country's first energy transition strategy, which provided targets for achieving net-zero emissions by 2050, including accelerating solar, wind and geothermal energy across the country.

The 2009 Regulatory Framework for Solar Water Thermal (Law 20365) provides technical standards, certification systems and fiscal incentives for solar water heating systems. The 2014-2018 Energy Programme plans to extend and improve the fiscal incentives for solar water heating, as well as providing subsidies

Solar power in Chile is an increasingly important source of energy. Total installed photovoltaic (PV) capacity in Chile reached 8.36 GW in 2023. [1] Solar energy provided 19.9% of national electricity generation in Chile in 2023, compared to less than 0.1% in 2013.

trade body expects Chile to install 2.9GW of solar PV, continuing the country's expansion in renewables. Chile is home to one of the highest irradiation regions in the world, the desert of Atacama, with "around 60 to 70% of solar PV" capacity so far installed in the regions of Atacama and Antofagasta,
