The solar powered fan will automatically shut down when the sun sets. Easy to Install: No mounting hardware with the solar panel.

Where can a solar fan be used?

A solar fan will work anywhere there is sun. If you want to use it in your garden, or camping, or in a workshop, greenhouse, or studio where there may not be power - or in fact anywhere, even in the house, where there isn't an outlet handy - if you can expose the solar panel to sun you're good to go.

How to choose a solar powered fan?

Solar-powered fans are at their core just like any other fan, and so the main considerations are how much air they will move and how quiet and stable they are while running. The solar panel should be strong enough to run the fan motor at full power whenever there is direct sun or to charge the battery as quickly as possible.

How much airflow does a solar utility fan have?

The airflow on our solar utility fan is 33cfm, the fan automatically kicks on with sunlight (between 10,000 and 40,000+lux) and it's not possible to add controls or a thermostat on the fan. Customers say the solar fan is easy to install and works well in direct sunlight, making it suitable for small spaces like sheds and chicken coops.
