

Solar generator integration

What is solar systems integration?

Solar systems integration involves developing technologies and tools that allow solar energy onto the electricity grid, while maintaining grid reliability, security, and efficiency. For most of the past 100 years, electrical grids involved large-scale, centralized energy generation located far from consumers.

How can solar energy be integrated?

By 2030, as much as 80% of electricity could flow through power electronic devices. One type of power electronic device that is particularly important for solar energy integration is the inverter. Inverters convert DC electricity, which is what a solar panel generates, to AC electricity, which the electrical grid uses.

Does a solar system work with a generator?

Seamlessly integrate solar and storage with a compatible generator for no loss of power when the system goes off grid or the battery reaches a low level of charge. Works with most AC generators installed in the United States. No external automatic transfer switch needed.

What is a solar generator & how does it work?

The generator reduces dependency on environment variables (irradiance for solar power production) and provides an additional power source while the system is off grid. The generator can be used to supply power to loads and/or charge batteries.

Can Enphase integrate a generator into a solar and storage solution?

Enphase Energy Systems can integrate a compatible generator into a solar and storage solution for extra power during an extended grid outage. No glitches. No resetting clocks. Take the generator integration certification training course to unlock this feature in the Enphase Installer App. Customers are loving Generator Support.

Can a solar inverter work with a generator?

The bottom line is you cannot allow solar panels and a generator to work in parallel. They must be electrically isolated at all times. If solar inverters "see" voltage from a generator, they will attempt to sync with the generator and backfeed power to it.
