

ST Board Chairman Sandis Jansons said that solar power has been a notable addition to the country's total energy portfolio in recent years - solar panels generated more than 128 gigawatt hours (GWh) of electricity in 2023. In Latvia's total electricity production balance, it is still a small part - about 2%.

Today, Latvia is a much different player in the renewable energy field. Over the past few years, the nation has shifted its focus toward integrating wind and solar energy on a broader scale, developing hybrid energy parks that combine wind turbines, solar panels, and battery storage systems.

The amount of solar electricity produced and transferred to the grid in Latvia has tripled over the past year, according to the electricity market review prepared by the Latvian transmission system operator JSC "High Voltage Network" (Augstsprieguma tīkls, AST) on ...

Driven by the active installation of solar panels and the development of solar parks, the amount of electricity generated by solar power plants increased significantly, reaching 239 GWh in 2023. This is more than three times, or 164 GWh, the amount generated in 2022.

Copenhagen, Denmark, 3 October, 2024 - European Energy is set to begin construction on the largest solar farm in Latvia to date. The solar farm will have a capacity of 148 MW once completed, which will make it one of the largest solar farms in the country.

Latvia's Solar Rooftop Country Profile. April 2024. Red = 0-1 points. Orange = 2-3 points. Green = 4-5 points. This country profile highlights the good and the bad policies. and practices of solar rooftop PV development within Latvia. It examines and scores six key areas: governance, incentives & support schemes, permitting procedures, energy ...
