

In a desert environment with 35% humidity, a 1-square-meter solar panel required 1 kilogram of gel to cool it, whereas a muggy area with 80% humidity required only 0.3 kilograms of gel per square meter of panel. The upshot in either case: The temperature of the water-cooled solar panel dropped by as much as 10°C.

A summary of Sint Maarten's solar markets. In 2014, Sint Maarten's council of ministers sanctioned the National energy policy document. This document was supposed to usher in a new era of renewable energy in the Caribbean Island country. More specifically, the policy document envisioned an 80% renewable energy capacity by 2020.

What are PV-Sunshades? The latest and innovative way to use the shades to protect the assets and structures from the harsh sun rays is Photovoltaic Sunshades. Like any ordinary shades, extended structure is required for the PV-Sunshades. Photovoltaic panels integrated in the extended roofs for power production. The flat or curved surfaces of the shades absorb ...
