What are the different types of solar power systems?

There are two main types of solar power systems, namely, solar thermal systems that trap heat to warm up water and solar PV systems that convert sunlight directly into electricity as shown in Figure below. The word photovoltaic comes from "photo," meaning light, and "voltaic," which refers to producing electricity.

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

Where can a solar power plant be installed?

For a bulk generation, this plant can be installed in any land. So, there are no specific site selection criteria like thermal and hydropower plants. The solar plant can be installed on the house or flat. So, it reduces the transmission cost as it generates energy near the load center.

What types of batteries are used in a solar power plant?

There are two types of batteries used in the solar power plant; Charge ControllerA charge controller is used to control the charging and discharging of the battery. The charge controller is used to avoid the overcharging of the battery. The overcharging of a battery may lead to corrosion and reduce plate growth.

Can a solar array be installed on a standing seam roof?

Currently, special clamps, referred to as S-5 clamps, are available to attach arrays without any penetrations to vertical and horizontal seam roofs and certain other standing seam roof profiles. These clamps make installation of the solar array a relatively easy matter compared to any other roof type.
