

Solar rack converted to fishing box

How does a solar-powered dock work?

A solar-powered dock works by using solar panels to charge a battery during the day. When the solar panel no longer detects light, the battery automatically kicks on to power devices, keeping the dock functional even into the night. Solar-powered dock features are becoming more popular, and ShoreMaster has always been a fan of innovation.

Can I use solar panels on my Boat?

You can of course mix and match our hardware and methods to create exactly what you need to suit your boat and the solar panels you've chosen. Pleasure boats, cruisers, working boats - real boat owners use our stainless to get solar on their boat, and they like it.

Do sectional docks require solar panels?

Solar panels are increasingly being used by dock owners to power their sectional docks, even at night. Solar panels capture solar radiation and convert it into light by absorbing the sun's energy during the day and storing it in the battery.

Are solar dock lights a good option?

Solar dock lights and 10-watt solar panel kits are good options for providing power to a boat dock from ShoreMaster. Solar power is more efficient, safe, and simple than standard power options. Solar-powered dock features are becoming more popular, and ShoreMaster has always been a fan of innovation.

How do you install a boat rack?

Rails running fore and aft create the base, and athwartship rails can augment the frame if needed. The entire installation can be made from off-the-shelf materials on the boat. This option puts the entire rack up on the roof and largely hidden from view.

Do you build solar panel mounts with your hardware?

Real people build solar panel mounts with our hardware all the time- see a selection of their recommendations below. We designed our saddle-type post and fork mounts with solar panels in mind. They give you easy, secure mounts for a solar panel frame that won't draw attention to itself.
