

Solar thermal power generation molten salt cost

What is molten salts thermal energy storage?

Learn more. Molten salts (MSs) thermal energy storage (TES) enables dispatchable solar energy in concentrated solar power (CSP) solar tower plants. CSP plants with TES can store excess thermal energy during periods of high solar radiation and release it when sunlight is unavailable, such as during cloudy periods or at night.

How molten salt technology is affecting solar power plants?

Improved molten salt technology is increasing the efficiency and storage capacity of solar power plants while reducing solar thermal energy costs. Molten salt is used as a heat transfer fluid (HTF) and thermal energy storage (TES) in solar power plants.

What is molten salt storage in concentrating solar power plants?

At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWh el. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power plants and electrical energy storage.

Can ternary molten salts reduce solar power costs?

Used as heat transfer fluid (HTF) for the storage and transfer of solar thermal power, the ternary molten salts push down solar power costs through improved performance, lower life-cycle costs and increased safety. Tests prove the cost efficacy of this blend in generating cheaper solar power electricity.

Is molten salt storage more expensive than an electric battery?

The table shows molten salt storage to be 33 times less expensive than an electric battery, when comparing the 833 EUR/kWh el to the 25 EUR/kWh th. In the best-case scenario, thermal energy can be stored at around 1/90th of the cost of electricity, when putting the 1,400 EUR/kWh el in relation to the 15 EUR/kWh th.

Can molten salts reduce the cost of solar power?

A new generation of molten salts has been developed by Yara and proven to reduce the cost of solar power generated using Concentrated Solar Power (CSP) technology. This media item is disabled because it requires consent for functional cookies. [Click here to open cookie settings](#)
