

# South Korea's energy

Why is South Korea a major energy importer?

South Korea is a major energy importer, importing nearly all of its oil needs and ranking as the second-largest importer of liquefied natural gas in the world. Electricity generation in the country mainly comes from conventional thermal power, which accounts for more than two thirds of production, and from nuclear power.

How does South Korea diversify its energy supply?

To diversify its energy supply, South Korea has implemented multiple strategies, leaning more toward alternative and renewable energy sources such as solar, wind, and hydrogen-based energy production.

How much energy does South Korea use?

In 2022, South Korea was the eighth largest energy-consuming country in the world, with over 12 exajoules of primary energy consumed domestically. To meet this demand, the country depends mainly on fossil fuels and nuclear energy.

What is South Korea's energy mix by 2022-2036?

The plan covers 2022-2036, with a revision every two years. As per the targets, South Korea's energy mix by 2030 and 2036 are as follows: Despite being one of the most innovative countries, South Korea is a climate laggard. The share of renewable energy in the power mix of South Korea is just 9% as of 2021.

What percentage of South Korea's energy consumption is renewable?

Although renewables accounted for the smallest portion (3%) of South Korea's primary energy consumption in 2021, renewables were the only energy source with a steadily increasing share since 2015. At that time, renewables accounted for less than 1% of total energy consumption.<sup>5</sup>

How can South Korea reduce its GH emissions?

green-house gases, South Korea has a clear obligation to reduce its GH emissions. This requires a greater impetus to its transition to renewable energy. An important element is grass-roots participation by energy prosumers (consumers who produce, use, and sell their own energy), b

South Korea, US could explore possible 3-way energy cooperation with Japan. On South Korea's energy dependence on Russia, such as coal imports, Pyatt noted that reducing the portion of fossil fuels is more of a broader goal to achieve the green energy transition than a matter concerning the ties with Russia.

As of 2020 South Korea's renewable energy sources included wind and solar energy. Yet, they generated just 3.8% of the country's electricity - up from 1% in 2015. Today, renewables account for just 6.4% of South Korea's energy mix, the lowest among all OECD members. The government aims to increase the share of renewable energy to 20% by 2030 ...
