The emergency power supply serves as a secondary power supply for the Variodyn D1. It has 24V, 12 Amp output voltage and current respectively. It has stabilized output voltage with enhanced filtering and short circuit proof. The emergency power supply has 2 load outputs and pluggable connections for remote info reports. Features & Benefits:

power supplies, computer power supplies, and variable frequency drives. These loads can cause distortion of the source voltage and current waveforms that can have harmful effects on generators. 1. If the non-linear loads on a generator exceed 25% of the generator load, the generator sub-transient reactance shall be limited to no more than 0.12

La fuente de alimentación de emergencia sirve como fuente de alimentación secundaria para la Variodyn D1. Tiene tensión de salida y corriente de salida máxima de 24 V y 100 Amp, respectivamente. Para el cumplimiento de EN54-16.
