What are SPC hex socket cap bolts made of?

SPC hex socket cap bolts, specifically M8 × 25mm, are made of stainless steel (A2-70). They are also known as inner hexagonal socket bolts or allen head bolts (screws) and are metric coarse. Widely used for PV module installation racking systems, machine assembly, and removable display panels.

What is a hexagon socket?

The International Organization for Standardization has also dealt with screw drives. Thus the standard ISO 10664 was created in 1988, which is commonly known as Hexagon socket is commonly referred to. Basically one can claim that when a mechanical technology manufacturer speaks of Torx® products, there is a mistake.

What are hex socket cap bolts made of?

Hex socket cap bolts (M8 × 25mm) from SPC solar are made of stainless steel (A2-70). Inner hexagonal socket bolts, also known as allen head bolts (screws), are metric coarse.

What are the characteristics of SPC solar panels?

Hex Socket Bolts, M8 × 25mm Allen Head Screw, A2-70 have the following characteristics: they are made of SUS 304, making them suitable for outdoor solar panel installation; they have a size of 8mm in diameter and 25mm length; they offer good chemical resistance; and they are tightened with a socket wrench. Besides stainless steel M8 allen bolts, there are other sizes available for SPC solar panels, such as M3, M6, and M10.
