

St Kitts and Nevis ocean energy storage

How will solar power help St Kitts and Nevis?

The Government of St. Kitts and Nevis, the state-owned St. Kitts Electric Company and Leclanché SA have broken ground on a landmark solar generation and storage project that will provide between 30-35% of St. Kitts baseload energy needs for the next 20-25 years while reducing carbon dioxide emissions by more than 740,000 metric tons.

What is the St Kitts solar project?

Upon completion, the St. Kitts project will be the largest solar generation and energy storage system in the Caribbean and a model for other island nations worldwide. In its first year of operation, the system will generate approximately 61,300 MWh of electricity with a 41,500 metric ton reduction of CO₂ emissions.

How much energy is lost in St Kitts & Nevis?

Reports indicate that in St. Kitts and Nevis, higher losses are largely attributable to nontechnical losses such as unmetered consumption, leading to losses that are higher than the U.S. Energy Information Administration's average transmission and distribution loss of 6%. By comparison, the U.S. Energy Information Administration reports an average transmission and distribution loss of 6%.

With the activation of this state-of-the-art energy storage system, St. Kitts and Nevis is poised to unlock a host of benefits that will propel it towards a greener and more sustainable future. By storing excess energy generated during peak production periods, the system ensures a consistent and reliable power supply, even during periods of low ...

The Government of St. Kitts and Nevis, the state-owned St. Kitts Electric Company (SKELEC) and Leclanché SA (SIX: LECN) today broke ground on a landmark solar generation and storage project that will provide between 30-35% of St. Kitts baseload energy needs for the next 20-25 years while reducing carbon dioxide emissions by more than 740,000 ...
