

State Grid Training Micro-Briefing

What is the SEPA briefing for Microgrid controller standards?

SEPA hosted a briefing for Microgrid Controller Standards IEEE 2030.7 and IEEE 2030.8 to provide an overview of the standards and explore the challenges and next steps for microgrid standards. The briefing focused on the adoption and testing associated with IEEE 2030.7 or IEEE 2030.8 by providing: Takeaways Include:

How has microgrid development benefited military facilities?

Later on, microgrid principles were rapidly adopted and have been applied at many sites, effectively making them the default power system for military facilities. Another major federal investment that has facilitated microgrid development in the United States is the American Recovery and Reinvestment Act of 2009 (ARRA).

What will microgrids do in 2035?

By 2035, microgrids are envisioned to be essential building blocks of the future electricity delivery system to support resilience, decarbonization, and affordability. Microgrids will be increasingly important for integration and aggregation of high penetration distributed energy resources.

What can we learn from grid-connected microgrids case studies?

One of the biggest lessons learned from conducting grid-connected microgrids case studies was the process of transitioning research tools to case study can be inefficient and prone to error, especially by modelers not trained in the intricacies of co-optimization and microgrid design.

What is a microgrid planning capability?

Planning capability that supports the ability to model and design new microgrid protection schemes that are more robust to changing conditions such as load types, inverter-based resources, and networked microgrids.

What are the trends in microgrid tools development?

In general, U.S. microgrid tools development has demonstrated some trends. First, microgrid simulation has evolved from traditional power system-based simulation and optimization to comprehensive power and thermal energy integration modeling.
