

# Thailand wind power battery storage

What is a wind power project in Thailand?

The project will be the first private sector project in Thailand to integrate utility-scale wind power generation with battery energy storage and will have an important demonstration effect.

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

How many mw can a solar generator store in Thailand?

Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees. Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site.

Why is battery storage a problem in Thailand?

This is partly due to a lack of clarity on how battery storage fits into existing electricity infrastructure. In 2022, the Thai government approved 24 BESS projects, all of which were located alongside solar operations. Their total combined storage capacity was 994 MW.

Why is battery energy storage important?

As the deployment of intermittent generation from wind and solar increases, battery energy storage becomes vital in providing higher levels of renewable energy to the grid and helping ensure the stability and reliability of the overall power system. The wind turbines reached commercial operations in April 2019.

Could a sodium-ion battery be a new business opportunity in Thailand?

The Federation of Thai Industries' Renewable Energy Industry Club sees potential in sodium-ion battery (SIB) production as an alternative to lithium-ion batteries. SIBs, made from rock salt, could offer a new business opportunity given Thailand's abundant rock salt reserves.

Battery energy storage systems (BESS) have emerged as a solution for mitigating the intermittent nature of solar and wind power with the rise of renewable energy. The application of BESS is essential in integrating large-scale renewable energy. Despite the crucial role that BESS play in facilitating the energy transition, Southeast Asia's BESS market ...

According to GlobalData, wind power accounted for 3% of Thailand's total installed power generation capacity and 2% of total power generation in 2023. GlobalData uses proprietary data and analytics to provide a complete picture of this market in its Thailand Wind power Analysis: Market Outlook to 2035 report. Buy the report here.

Environment and social compliance audit reports describe project compliance with environmental and social safeguards requirements and include information on consultations and participation of affected people, as well as conclusions and recommendations. This document dated February 2020 is provided for the ADB project 53174-001 in Thailand.
