The island of South Georgia is unusual among oceanic islands for having pre-Cretaceous sedimentary rocks underlying much of the island and a significant portion of felsic igneous rocks. Two-thirds of the island consists of intensely folded flysch, capped with Aptian age fossils, tuff and greywacke in the Cumberland Bay Series.

Solar energy development in the United States will be critical for meeting the nation's growing demand for clean renewable energy. In 2023, the Solar Energy Industry Association ranked Georgia 7th for total installed solar capacity and ...

South Georgia and the South Sandwich Islands are a chain of Subantarctic islands in the Southern Ocean surrounding Antarctica. The islands are an overseas territory of the United Kingdom: they have no permanent residents and their administration is physically based in the Falklands, but since 1985 they have been a separate jurisdiction ...

South Georgia & the South Sandwich Islands is a haven for wildlife. They are home to about five million seals of four different species, and 65 million breeding birds of 30 different species. Amongst these is the world's only sub-Antarctic songbird, the endemic South Georgia pipit. ... To provide the best experiences, we use technologies like ...

South Georgia & the South Sandwich Islands are only accessible by sea. There is no visitor accommodation ashore, therefore most people visit by cruise ship or yacht. All visits require a visit permit. Visit permit applications for both commercial and private vessels are submitted by the vessel owners or operators.
