How do solar panels turn sunlight into electricity?

There are several ways to turn sunlight into usable energy, but almost all solar energy today comes from "solar photovoltaics (PV)." Solar PV relies on a natural property of "semiconductor" materials like silicon, which can absorb the energy from sunlight and turn it into electric current.

How do solar panels generate electricity?

Outside the metal frame you can find the junction box and wiring which allow you to connect the panel to external wiring. This is where electricity generated by the panel flows into an electrical system of a home or a power grid. Now that you understand how solar panels are constructed, let's dive into how they generate electricity.

Is solar power the cheapest way to generate electricity?

If you are looking into options for making your house more eco-friendly and saving some money, solar power is probably one of the most attractive renewable energy options. In fact, solar power is becoming the cheapest way to generate electricity, according to Bloomberg New Energy Finance analysts.

Should you use solar power to generate electricity at home?

Using solar power to generate electricity at home is a very appealing option for a number of reasons: not only would you be reducing your overall environmental footprint and greenhouse gas emissions, but you would be reducing your bills and could even generate some income by selling back excess energy into the grid.

How does solar energy conversion work?

The initial step in the process of solar energy conversion involves the absorption of sunlight by the photovoltaic (PV) cells within a solar panel. These cells, constructed from semiconductor materials such as silicon, capture photons from sunlight. When these photons strike the PV cells, they excite electrons, thereby creating an electric current.

What is solar energy & how does it work?

Solar energy is a form of renewable energy, in which sunlight is turned into electricity, heat, or other forms of energy we can use. It is a "carbon-free" energy source that, once built, produces none of the greenhouse gas emissions that are driving climate change.

Instead of sending surplus electricity to the grid, a solar diverter switch can power the immersion heater in your hot water tank, storing hot water for you to use later. On its own, excess solar energy is unlikely to meet all ...
