Is a DC-DC boost converter suitable for utility level photovoltaic systems?

The paper presents a highly efficient DC-DC Boost converter meant for utility level photovoltaic systems. Solar photovoltaic cells are highly sought-after for renewable energy generation owing to their ability to generate power directly. However, the outputs of solar arrays range in lower DC voltage.

Do I need a boost converter for a PV array?

So it is necessary to couple the PV array with a boost converter. Moreover our system is designed in such a way that with variation in load, the change in input voltage and power fed into the converter follows the open circuit characteristics of the PV array. Our system can be used to supply constant stepped up voltage to dc loads.

How to step-up PV panel output voltage?

Therefore, to step-up the PV panel output voltage, the reliable and efficient converters are needed. The traditional DC-DC power converters such as boost converter (BC) and buck-boost converter (BBC) are employed with the MPPT-based controller at various places for maximum power extraction from the solar PV panel.

Why is solar photovoltaic (PV) a good choice for power generation?

Nowadays, electricity production from the solar photovoltaic (PV) panel is a remarkable choice for power generation in industrial sectors due to its pollution-free characteristic. The DC-DC power converters are extensively utilized in PV-based systems for interfacing between the PV panel and the connected load.

How do PV modules increase power rating?

Therefore, PV modules are assembled in series-parallel combinations to increase the power rating. This is where power electronic interfaces or power optimizers such as DC-DC converters are used to boost low level DC output voltage from PV arrays to voltage levels as required by utility grid applications.

Which high gain buck-boost converter is suitable for solar PV-based systems?

In this chapter, initially, the description of DC-DC high gain converters with different solar PV-based systems is presented, and then, an improved high gain buck-boost converter (IHGBBC) suitable for PV-based systems is demonstrated. The IHGBBC produces higher-voltage gain than that of a single-cell traditional buck-boost converter (TBBC).
