What are thin-film solar panels?

Thin-film solar panels use a 2nd generation technology varying from the crystalline silicon (c-Si) modules, which is the most popular technology. Thin-film solar cells (TFSC) are manufactured using a single or multiple layers of PV elements over a surface comprised of a variety of glass, plastic, or metal.

What materials are used for thin-film solar technology?

The most commonly used ones for thin-film solar technology are cadmium telluride (CdTe), copper indium gallium selenide (CIGS), amorphous silicon (a-Si), and gallium arsenide (GaAs). The efficiency, weight, and other aspects may vary between materials, but the generation process is the same.

What is the difference between crystalline silicon and thin-film solar panels?

There are many differences regarding crystalline silicon and thin-film solar panel technology. One important difference is how the temperature affects the efficiency of each technology, c-Si solar cells are more affected by temperature than thin-film technologies.

How efficient are CdTe thin-film solar panels?

CdTe thin-film solar panels reached a 19% efficiency under Standard Testing Conditions (STC), but single solar cells have achieved efficiencies of 22.1%. This technology currently represents 5.1% of the market share worldwide, falling second only under crystalline silicon solar panels that hold 90.9% of the market.

Why are encapsulated photovoltaic modules rigid or flexible?

The different mechanical performances of the rigid and flexible substrate, therefore determine the mechanical flexibility of the encapsulated photovoltaic module or products eventually, lead to the so-called rigid or flexible photovoltaics.

How are CIGS thin-film solar panels made?

Manufacturing for Copper Indium Gallium Selenide (CIGS) thin-film solar panels has improved throughout history. Currently, CIGS thin-film solar cells are manufactured by placing a molybdenum (Mo) electrode layer over the substrate through a sputtering process. The substrate is usually manufactured with polyimide or a metal foil.
