What are thin film solar cells?

Thin film solar cells are favorable because of their minimum material usage and rising efficiencies. The three major thin film solar cell technologies include amorphous silicon (a-Si), copper indium gallium selenide (CIGS), and cadmium telluride (CdTe).

What is a thin-film solar PV system?

This is the dominant technology currently used in most solar PV systems. Most thin-film solar cells are classified as second generation, made using thin layers of well-studied materials like amorphous silicon (a-Si), cadmium telluride (CdTe), copper indium gallium selenide (CIGS), or gallium arsenide (GaAs).

What are the new thin-film PV technologies?

With intense R&D efforts in materials science, several new thin-film PV technologies have emerged that have high potential, including perovksite solar cells, Copper zinc tin sulfide (Cu 2 ZnSnS 4, CZTS) solar cells, and quantum dot (QD) solar cells. 6.1. Perovskite materials

Are thin-film solar cells the future of PV?

It is safe to assume that thin-film solar cells will play an increasing role in the future PV market. On the other hand, any newcomer to the production scene will, for obvious reasons, have a very hard time in displacing well-established materials and technologies, such as crystalline and amorphous silicon.

Are thin-film solar cells better than first-generation solar cells?

Using established first-generation mono crystalline silicon solar cells as a benchmark, some thin-film solar cells tend to have lower environmental impacts across most impact factors, however low efficiencies and short lifetimes can increase the environmental impacts of emerging technologies above those of first-generation cells.

What materials are used for thin-film solar technology?

The most commonly used ones for thin-film solar technology are cadmium telluride (CdTe), copper indium gallium selenide (CIGS), amorphous silicon (a-Si), and gallium arsenide (GaAs). The efficiency, weight, and other aspects may vary between materials, but the generation process is the same.
