What is a multi-time scale scheduling strategy for Microgrid?

In , a multi-time scale scheduling strategy was proposed for microgrid, in which the system is able to pre-allocate the capacity of the system before the day and adjust the day-ahead scheduling plan according to the real-time capacity of renewable energy sources during the day.

What is the optimal scheduling strategy for microgrids?

In order to balance the accuracy,economy and robustness of microgrid scheduling better,a multi-time scale optimal scheduling strategy for microgrids considering the uncertainty of source and load is proposed.

How long does a microgrid multi-time scheduling optimization take?

As the last step of the entire microgrid multi-time scheduling optimization,the real-time adjustment stage takes 15 min as the control time domain and 5 min as the index value.

Why is multi-time scale optimization applied in microgrid dispatching?

The accuracy of the prediction value of source and load has the characteristic of improving with the decrease of the time scale,so multi-time scale optimization is applied to the field of microgrid dispatching to maintain the smooth power of contact lines between microgrid and external networks,.,.

Can multiple time-scale optimization optimize microgrid operation?

Simulation results shown that the proposed multiple time-scale optimization scheduling approach shown that minimum operational cost and maximize the use of renewable energies, making the microgrid operation more economical, cleaner and more efficient. Conferences & 2018 Chinese Automation Congr...

What is a Das microgrid?

Where DAS means that instead of using intra-day rolling scheduling optimization and real-time adjustment scheduling optimization,the microgrid directly smooths out the errors caused by the day-ahead forecast through power and gas purchases on the basis of the contact line power in the day-ahead scheduling. This paper aims to enhance the low-carbon and economic efficiency of the microgrid system through coordination between the source and load resources. On the source side, a carbon ...

1 INTRODUCTION. The electric power system, a vast and complex system, is managed through power system community. 1, 2 The network has been, is, and will be characterized by sharing ...

In this paper, a novel multi-time scale dynamic robust optimal scheduling strategy is proposed for the coordinated operation of CCHP microgrid, which includes two time scales: ...

Microgrid cluster (MGC) formed by interconnected multiple microgrids (MGs) is beneficial to the

enhancement of system economy and supply reliability. ... Then, a multi-time ...

Microgrids and modern bulk power systems usually have multiple time scale dynamics, such as slow and fast dynamics. In this study, the stability of a wind-diesel hybrid ...

In order to cope with the uncertainties and fluctuations of the source and load, it is necessary to adjust the dispatch plan in real time [2], [3] nsidering that the control accuracy ...

To schedule the DERs and smart buildings of a microgrid more efficiently and bridge the research gaps, a novel two-stage scheduling method for a BIM system via multi-time scale and MPC method is proposed in this paper. ...

For disturbances caused by the demand-side, a hierarchical control strategy is developed in [10], which solves the problem of peaks and valleys of loads over multiple time scales. Reference ...
