

Are solar-powered irrigation systems sustainable?

Solar-powered irrigation systems (SPIS) are a clean technology option for irrigation, allowing the use solar energy for water pumping, replacing fossil fuels as energy source, and reducing greenhouse gas (GHG) emissions from irrigated agriculture. The sustainability of SPIS greatly depends on how water resources are managed.

Are solar-powered irrigation systems a viable solution to decarbonize the irrigation sector?

Solar-powered irrigation systems (in particular solar PV) integrated with water-saving irrigation techniques represent a viable solution to decarbonize the irrigation sector, especially in those areas that heavily rely on diesel-powered water pumping systems, and to reduce pressure on water resources.

What is a solar-powered irrigation system (SPIS)?

In a solar-powered irrigation system (SPIS), electricity is generated by solar photovoltaic (PV) panels and used to operate pumps for the abstraction, lifting and/or distribution of irrigation water. SPIS can be applied in a wide range of scales, from individual or community vegetable gardens to large irrigation schemes.

Are solar and wind water pumping systems better for irrigation of grassland?

Campana et al. investigated solar and wind water pumping systems for irrigation of grassland in Hail, Inner Mongolia, China. Solar water pumping systems showed better performance than wind water pumping systems for irrigation due to the better match between water supply and crop water demand.

What is Internet-of-things based solar irrigation system?

Internet-of-things based solar irrigation system. The controller is also equipped with Wi-Fi communication that enables the transfer of operational conditions monitored by the sensors to a remote web server as well as allowing the end-user to remotely control the system.

Does solar-powered drip irrigation improve food security in the Sudano-Sahel?

Solar-powered drip irrigation enhances food security in the Sudano-Sahel. Proceedings of the National Academy of Sciences of the United States of America, 107(5), 1848-1853. Campana PE, Li H, Zhang J, Liu J, Yan J. 2015. Economic optimisation of photovoltaic water pumping systems for irrigation. Energy Conversion and Management, 95, 32-41.

This study presents and assesses the novelty of a cutting-edge solar-powered automated irrigation system that incorporates a single-axis solar tracker. The research entails the meticulous ...

THE WATER-ENERGY-FOOD NEXUS IN THE CONTEXT OF IRRIGATION 7  
2. SOLAR-POWERED IRRIGATION SYSTEMS: AN OPPORTUNITY 11  
3. SCALING-UP DEPLOYMENT: THE ENABLING ENVIRONMENT 19  
4. KEY POLICY MESSAGES: ADOPTING A NEXUS APPROACH 27

REFERENCES. Solar pumping for irrigation: Improving livelihoods and ...

Solar Powered Irrigation Systems are sustainable and cost-saving alternative. Our approach To help improve the agriculture sector and the livelihoods of people, the Green People's Energy Project aims to foster investment into Solar Powered Irrigation Systems (SPIS). Farmers, small-scale enterprises, NGOs, cooperatives, women's groups, and other

A solar power irrigation system is designed to harness the power of the sun to irrigate crops. The design of a solar power irrigation system is dependent on site-specific biophysical and socio-economic conditions. A qualified system integrator should configure it to ensure proper matching and dimensioning of its components. The most common ...

Solar powered smart irrigation systems are the answer to the Indian farmer. This system consists of solar powered water pump along with an automatic water flow control using a moisture sensor. It ...

The project "Renewable Energies for Agricultural and Rural Development in Tunisia" (REFAT) is based on the following axes: 1/ Dissemination of solar-powered irrigation systems and installation of low-energy water treatment ...

Solar-powered drip irrigation system is a boon for farmers, as they can harness the power of the sun and help you provide water to your crops. Here are simple steps that will help you know how to use a solar-powered drip irrigation system. Components Required For A Solar Powered Drip Irrigation System.

Solar-powered irrigation presents a promising solution to the pressing challenges faced by smallholder farmers in Africa and the Middle East. Harnessing the sun's power to provide sustainable water access for agriculture enables this technology to offer a pathway to increased productivity, food security and environmental sustainability. ...

vegetable gardens to large irrigation schemes. The essential components of SPIS are: a solar generator, i.e. a PV panel or array of panels to produce electricity, a mounting structure for PV panels, fixed or equipped with a solar tracking system to maximize the solar energy yield, a ...

The study then examined five scenarios to assess the suitability of solar-powered technology for pumping groundwater and/or surface water (Table 1). Scenarios 1 and 2 envisaged solar-powered irrigation using groundwater at very shallow (0-7 m) and shallow (0-25 m) levels, respectively.

Application of smart solar system for irrigation purposes, 2016. Scarcity of water for irrigation purposes is one of the major problems in our country. Every year, a huge amount of water is wasted in agriculture due to over-watering. To address this problem, a solar powered smart irrigation system is presented in this paper.

Abstract--In this study, an automatic drip irrigation of dwarf cherry trees system with solar powered Brushless

DC Motors (BLDC) has been designed and implemented in Zile District of Tokat...

The Solar-Powered Irrigation System (SPIS) flagship program of the Department of Agriculture (DA) has been undertaken with the purpose of creating a vibrant agricultural economy, but its provision ...

Why choosing solar irrigation? 12 out of 18 countries in the Middle East and North Africa (MENA) region face water scarcity. Almost 85 percent of water in the region is used for irrigation. The potential for renewables is high in MENA countries, and solar-powered irrigation systems are among the promising solutions to the issues of water stress in agriculture and the ...

The smart solar powered irrigation system operational block diagram. 3.1 The operational block diagram components. The components used to design the smart solar-powered irrigation system are explained in this ...

A demonstration unit under Broccoli on a 100 m<sup>2</sup> drip irrigation system was established at Makerere University Agricultural Research Institute, Kabanyolo (MUARIK) for conducting system functionality testing for the smart solar irrigation control system kit (Fig. 6). The soil was characterized at 0-30 cm as sandy clay loam with a bulk density ...
