

Two Sessions New Energy Storage

Where can China install new energy storage capacity?

Besides Inner Mongolia, Shandong, Guangdong and Hunan provinces as well as the Ningxia Hui autonomous region are areas ranking in the first-tier group for installing new energy storage capacity in China.

Can new energy storage help build a new power system in China?

New energy storage, or energy storage using new technologies, such as lithium-ion batteries, liquid flow batteries, compressed air and mechanical energy, will become an important foundation for building a new power system in China, Lin said.

Why is the 'two sessions' important?

Why is the "two sessions" important? The "two sessions" is the annual gathering of two bodies: China's top legislative body, known as the National People's Congress (NPC), and the Chinese People's Political Consultative Conference (CPPCC), an advisory body similar to the House of Lords in the UK, but without any voting rights on legislation.

What is a two sessions report?

The report is the central part of China's "Two Sessions" meetings. Delivered by the premier, it outlines government achievements from the past year and sets goals and directions for the coming year. It is also usually when the country's GDP growth target for the year is announced. What are the Two Sessions?

How many kilowatts a year is energy storage?

According to the NEA, the total installed capacity of new types of energy storage projects reached 8.7 million kilowatts with an average power storage period of 2.1 hours last year, an increase of over 110 percent from the end of 2021.

Can mega-energy storage stations ensure stable grid operations?

Li Jianwei, chief engineer of the State Power Investment Corp, said the mega-energy storage stations can ensure stable grid operations by shaving peak and modulating frequency for the power system, as power consumption during off-peak hours is at a relatively lower price.
