E-fuel consortium will enable the production of sustainable fuels for transportation from CO₂ to increase energy self-sufficiency and to reach the low carbon society targets. A value chain from hydrogen produced by renewable electricity and captured CO₂ to paraffinic drop-in transportation fuels is developed in the E-fuel project. Electrofuels (e-fuels) are needed in addition to other ...

The development of high-temperature electrolysis, CO₂ capture, and hydrocarbon synthesis technologies have been completed in a Business Finland funded Veturi e-fuel research project, and the integrated technology is now ready for implementation. VTT and Neste have agreed to build a technology demonstration facility at the VTT Bioruukki Pilot ...

Venezuela has the largest conventional oil reserves and the second-largest natural gas reserves in the Western Hemisphere. It also has vast deposits of extra-heavy crude oil and bitumen. Venezuela consistently ranks in the top ...
