

How much energy will Vietnam power produce in 2024?

In the first quarter of 2024, Vietnam Power achieved a commercial power output of 62.66 billion kWh, an increase of 11.42% over the same period in 2023. With preparations spanning April through July 2024 and a total energy requirement of 111.468 billion kWh, the plan represents a 2.3 billion kWh increase over the prior plan.

Will solar energy prices change in Vietnam?

In addition, as already mentioned above, the inclusion of solar radiation intensity in determining FiTs will mean that prices will now differ in different regions in Vietnam, which could impact where investors will choose to locate solar power plants.

What is solar energy in Vietnam?

Solar energy comprises heat and radiant light from the sun that can be harnessed by leveraging technologies such as solar power (used to generate electricity) and solar thermal energy (used for applications such as water heating). The Vietnamese solar energy market is segmented by technology.

Will Vietnam's rooftop solar sector get a major investment boost?

The Vietnam rooftop solar sector is set for a major investment boost with a new draft decree published in early October 2024.

What is Vietnam's solar decree?

The Decree is an important piece of legislation for investors and companies that are planning to launch wind or solar power projects in Vietnam, as they will determine the pricing for electricity generation for the foreseeable future. Vietnam pricing mechanisms for generation of solar and wind power

Who bought 100 MWp solar power farm assets in Vietnam?

March 2023: SP Group bought 100 megawatt-peak (MWp) solar power farm assets in central Vietnam's Phu Yen province. Europlast Phu Yen and Thanh Long Phu Yen are 50 MWp facilities.

4. When the average electricity selling price increases by 3% or more compared to the current average electricity selling price, the electricity price is allowed to increase. 5. The minimum average electricity price adjustment time is 3 ...

Furthermore, this year, the country announced a project for the world's biggest solar farm. The 8 GW power plant will produce enough energy to meet the needs of 6 million households. According to Climate Action Tracker, the country is about to surpass its 2030 NDC target of 1,200 GW in solar and wind capacity five years earlier. Throughout 2023, China ...
