

# What can be stored in elevator lockers

What are the requirements for egress from an elevator lobby?

The requirements for egress from an elevator lobby differ between the International Building Code (IBC) and NFPA 101 - The Life Safety Code or NFPA 5000 - Building Construction and Safety Code. The IBC simply states that elevator lobbies must have at least one means of egress complying with Chapter 10 and other provisions within the code.

Are elevator lobby doors code compliant?

Some state and local building codes have added similar language pertaining to elevator lobby doors, however, the IBC does not currently include a section specifically addressing elevator lobby door locks - only the requirement that elevator lobbies have at least one code-compliant means of egress.

Can elevator door assemblies be electrically locked?

The section states that where permitted by the occupancy chapters, door assemblies separating the elevator lobby from the exit access may be electrically locked, provided that the long list of criteria is met. This list includes: Initiation of the fire alarm system by other than the manual fire alarm boxes unlocks the elevator lobby door.

Can delayed egress locks be used to secure elevator lobby doors?

Depending on the use group, the IBC may allow delayed egress locks to be used as a means of securing elevator lobby doors, but the required signage can be confusing for building occupants using the doors during periods when they are not secured.

Do elevators qualify for egress?

Because elevators do not usually qualify as a means of egress, there must be an egress path leading from the elevator lobby to an exit enclosure - typically a stairwell enclosed with fire-resistant walls and opening protectives (fire door assemblies).

Can items be stored in egress access corridors?

Items cannot be stored in corridors designated as egress access corridors no matter the width of the corridor. The exception are crash carts, which are considered permanently in-use emergency medical equipment, and carts containing PPE for isolation when associated for a specific patient (s), which are also considered permanently in-use.
