

What do the letters on the photovoltaic panels represent

What is a photovoltaic system?

Photovoltaics (PV): Devices that convert solar energy into electricity using semiconductors (this conversion is called the photovoltaic effect). Solar panels are photovoltaics and make up a PV system. Power output/rating: The number of watts a solar panel produces in ideal conditions.

What is a solar energy glossary?

W ----- Y ----- Z ----- Solar Energy Glossary of Photovoltaic Terms is a comprehensive collection of terms pertaining to solar installations, solar electricity, and solar power generation. The definitions included relate to photovoltaic, concentrated solar power, and solar thermal technologies.

What is a solar panel?

Solar photovoltaic (PV) panels convert sunlight into usable electricity by using cells, usually made from silicon, a semiconductor material, embedded in a metal frame with a glass casing. Solar thermal panels are another type of solar panel that can utilize the sun's power.

What is a solar cell called in physics?

In physics, a solar cell is referred to as a PV cell because it produces electricity when exposed to light or other radiant energy. Solar cells, solar modules, and solar panels are often called PV cells, PV modules, and PV panels to indicate how their electricity is produced. See Also Solar Cell, Solar Module, Solar Array.

What types of electronics are used in solar panels?

Semiconductors are used widely in electronics, including solar panels. Solar cells: Semiconductors typically made of silicon that generate electricity when exposed to photons (aka particles of light) via the photovoltaic effect. Solar panels for home systems typically contain 60 solar cells.

How do solar PV panels work?

Solar PV panels are measured based on the percentage of energy that is converted. The higher the panel's ability to collect energy from photons (light particles) and convert it into usable electricity, the higher its efficiency percentage will be.
