

Xiangxi solar power generation price consultation

How much does solar power cost in China?

In particular, in the economically developed eastern provinces (e.g. Shanghai, Zhejiang, Jiangsu, Guangdong etc.), the PV electricity (mainly BIPV) is 0.67-0.86 RMB/kWh. The cost of LSPV stations ranges from 0.45 to 0.75 RMB/kWh, lower than the BIPV system owing to the scale effect and the strong solar radiation.

Will China's crowded solar power sector keep global prices low?

BEIJING, April 3 (Reuters) - Consolidation in China's crowded solar power sector is pushing smaller players out of the market, but excess production capacity - with more on the way - threatens to keep global prices low for years.

What is China's production capacity for solar modules?

At the end of 2023, China's annual production capacity for finished solar modules was 861 gigawatts (GW) equivalent according to China Photovoltaic Industry Association data, more than double global module installations of 390 GW.

Why is solar power less cost-effective in Ningxia?

This suggests that, although these provinces are economically developed and have sufficient housing areas for PV, poor solar radiation intensity (lower than 1300 kWh/m²/year, compared with 2100 kWh/m²/year in Ningxia) makes the solar power system much less cost-effective in these provinces than in others.

4. Discussion

What are China's national goals for solar power generation?

China continues to raise its national goals for solar power generation. In 2007, the National Development and Reform Commission (NDRC) issued its Mid- and Long-Term Plan for Renewable Energy Development, which aimed at achieving a solar power capacity of 0.3 GWp by 2010, and 1.8 GWp by 2020 and had been accomplished now.

Will solar power increase cost competitiveness?

"The increasing cost competitiveness of solar power generation, driven by expanded production and upstream cost reduction, will help promote renewable energy across the world," Shanghai-based brokerage firm BOCI Securities said in a recent report.

Today, anyone can set up a solar power plant with a capacity of 1KW to 1MW on their land or rooftops. Ministry of New and Renewable Energy (MNRE) and state nodal agencies are also providing 20%-70% subsidy on solar for residential, ...

generation source and the less correlated it is with power demand, the higher are the potential additional costs
