

Does Myanmar have a yearly energy plan?

The yearly plan excludes coal-based power plants, of which the country currently has 120 MW of installed capacity. Based on the Energy Masterplan of Myanmar, three scenarios are considered (Table 12.3). In this masterplan, the shares differ between scenarios.

How has Myanmar's energy consumption changed over the years?

Myanmar's total final energy consumption (TFEC) increased by about 2.3% per year from 9.4 Mtoe in 1990 to 17.46 Mtoe in 2017. The transport sector grew the fastest with an AAGR of 7.5% between 1990 and 2017. Consequently, this sector's share of the TFEC increased from around 4.7% in 1990 to almost 17.8% in 2017.

Is Myanmar a natural gas producer?

Shell discovered the Apyauk gas field 50 kilometres northwest of Yangon in 1991. Myanmar is today primarily a natural gas producer. As of 2015, Myanmar exports gas to Thailand and China. Myanmar had proven gas reserves of 10 trillion cubic feet in 2012, with an annual production capacity of 416 BcF.
