

How does Armenia generate electricity?

Most of the rest of Armenia's electricity is generated by the natural gas-fired thermal power plants in Yerevan (completed in 2010) and Hrazdan. Upon gaining independence, Armenia signed the European Energy Charter in December 1991, the charter is now known as the Energy Charter Treaty which promotes integration of global energy markets.

Does Armenia have solar energy?

Armenia has significant solar energy potential: average annual solar energy flow per square metre of horizontal surface is 1 720 kWh (the European average is 1 000 kWh), and one-quarter of the country's territory is endowed with solar energy resources of 1 850 kWh/m² per year. Solar thermal energy is therefore developing rapidly in Armenia.

How much energy does Armenia need?

It has been an observer to the Energy Community since 2011 and a member of the Eastern Partnership since 2009. Although Armenia's energy demand averages more than 3 Mtoe (3.59 Mtoe in 2020) and the country does not produce any fossil fuels, it manages to cover 27% of energy demand with domestic energy production.

Why is Armenia a partner country of the EU INOGATE energy programme?

Armenia is also a partner country of the EU INOGATE energy programme, which has four key topics: enhancing energy security, convergence of member state energy markets on the basis of EU internal energy market principles, supporting sustainable energy development, and attracting investment for energy projects of common and regional interest.

Does Armenia use natural gas?

Natural gas represents a large portion of total energy consumption in Armenia, accounting for 50% and is the primary means of winter heating in the country.

How can Armenia synchronise its energy system with its neighbours?

To synchronise its system with those of its neighbours and provide electricity at competitive prices, Armenia will have to open its relatively closed electricity market. The Ministry of Territorial Administration and Infrastructure (MTAI) is responsible for developing and implementing energy policy.

Green zircon refers to a variety of the mineral zircon (ZrSiO₄) that exhibits a green coloration. Zircon itself is a popular gemstone known for its wide range of colors, including blue, yellow, brown, red, and green. The green color in zircon is typically caused by the presence of certain impurities or radiation-induced defects in the crystal lattice.

Zircon, scientifically known as zirconium silicate (ZrSiO₄), is a naturally occurring mineral found in the Earth's crust. It is a dense, hard, and durable mineral that typically appears as small, reddish-brown to grayish

crystals. Zircon contains the elements zirconium and silicon, along with trace amounts of other elements such as hafnium, uranium, and thorium.
